

Glaze

Long open time

For an extended application time

Advanced Paint Effect Product that really works!

This product has been engineered in a way to add depth to any special finishing project and creates an infinite variety of designs and effects on interior surfaces. Ideal for all faux finishes. Use SamaN glaze anywhere a glaze is recommended. It slows down the drying process. Works great with all faux and paint effects applicators. The SamaN glaze can be tinted with universal colorant and/or intermixed with ordinary latex paint and turned into a translucent, durable colored glaze with a one hour "open time".

USAGE: Use on new or previously painted furniture, trims, walls and ceilings. Recommended for interior surfaces of wood, cured plaster, wallboard, metal and masonry.

SURFACE PREPARATION: Make sure the surface is clean, dry and free of wax and grease. High gloss areas should be dulled with fine grit sandpaper to ensure proper adhesion.

DIRECTION: Test on an inconspicuous area to check the desired color and effect prior to proceeding. **To use in faux finishes :** mix 1 part of latex paint with 4 parts of glaze. Use any faux effect technique to get the result you want. **To use as a dry time extender :** mix 4 parts of latex paint with 1 part of glaze. Work in an area of about 3ft x 3ft and do not let the edge dry.

CLEANING: Clean-up tools with warm soapy water.

WORKING TIME: SamaN glaze gives you the longest working time, over an hour! (the time that the glaze remains wet and workable).

COVERAGE: 100-200 sq.ft. / litre when mixed with latex paint.

VOC: This product does not exceed a VOC of 100 g/l
